

Spatial Clusters of Missed Settlements

- cluster_type
- High-High
 - High-Low
 - Low-High
 - Low-Low

0 2 4 6 8 10 12 km

This map shows statistically significant spatial clusters of missed settlements identified using Local Moran's I. High-High clusters indicate hotspots where missed settlements are surrounded by other missed settlements, suggesting systematic operational gaps. Low-Low clusters represent areas of strong coverage. Outlier clusters (High-Low, Low-High) highlight local anomalies requiring targeted supervision or mop-up.
